

Habitats Regulations Assessment (HRA)
Screening Report
**Wadhurst Neighbourhood Plan (Pre-Regulation
14)**
October 2022

Prepared by Wealden District Council

1. Introduction

1.1 This Habitats Regulations Assessment (HRA) screening report has been undertaken by Wealden District Council in respect of the draft Wadhurst Neighbourhood Plan dated 15 August 2022 (Pre-Submission Regulation 14), which has been produced by Wadhurst Parish Council.

1.2 The Wadhurst Neighbourhood Plan sets out a vision, objectives and policies covering a plan period up to 2036. The Plan **does not allocate sites for development.**

1.3 The vision of the Wadhurst Neighbourhood Plan is as follows:

“Wadhurst Parish will continue to be a collection of friendly and vibrant distinct communities. The Parish will retain and support its rural ‘village feel’, historic character and heritage. Justifiable, sensitive and sustainable development will be supported, whilst robustly protecting the High Weald Area of Outstanding Natural Beauty. The Parish economy and its popular High Street will be revitalised by improvements to the roads, traffic control, parking and active support of businesses. Sustainable ways of improving travel and leisure activities and facilities, which promote wellbeing, will be sought wherever possible.”

1.4 The aim of this HRA screening report is to assess whether this Neighbourhood Plan would, alone or in combination with other plans and policies, cause any likely significant effects on European sites.

2. Legislation

2.1 Under Article 6(3) of the Habitats Directive (92/43/EEC)¹, an appropriate assessment is required, where a plan or project is likely to have a significant effect upon a European Site, either individually or ‘in combination’ with other projects. This requirement is set out in the Conservation of Habitats and Species Regulations 2017² (the “Habitats Regulations”), as amended.

2.2 The UK left the EU on 31 January 2020 under the terms set out in the European Union (Withdrawal Agreement) Act 2020 (“the Withdrawal Act”). The Withdrawal Act retains the body of existing EU-derived law within our domestic law. The most recent amendments to the Habitats Regulations – the Conservation of Habitats and Species (Amendment) (EU Exit) Regulations 2019³ – make it clear that whilst the UK is no longer a member of the EU, a requirement for Habitats Regulations Assessment will continue.

¹ [Habitats Directive 92/43/EEC](#)

² [The Conservation of Habitats and Species Regulations 2017](#)

³ [The Conservation of Habitats and Species \(Amendment\) \(EU Exit\) Regulations 2019](#)

2.3 The Conservation of Habitats and Species Regulations 2017 (the 'Habitats Regulations'), transposes the Habitats Directive into UK Law. Regulation 105, provides:

“(1) Where a land use plan –

(a) is likely to have a significant effect on a European site or a European offshore marine site (either alone or in combination with other plans or projects), and

(b) is not directly connected with or necessary to the management of the site,

the plan-making authority for that plan must, before the plan is given effect, make an appropriate assessment of the implications for the site in view of that site’s conservation objectives”.

2.4 This means that any proposed plan that may affect a European site (Special Area of Conservation or Special Protection Area) must first undergo an assessment to look at its potential impacts applying the precautionary principle. This is to determine if the plan will adversely affect the integrity of the European site(s) concerned. This process is known as a Habitats Regulations Assessment and the first stage considers any likely significant effects (the screening stage).

2.5 Following the 2018 *People over Wind*⁴ ruling, mitigation measures cannot be applied at the screening stage in order to rule out likely significant effects and thus prevent the plan progressing to the second stage (appropriate assessment).

2.6 Where likely significant effects are identified at the screening stage, the second stage of the HRA process is triggered. The appropriate assessment looks at the implications of a plan for a European site in view of the site’s conservation objectives. Furthermore, mitigation measures may be introduced at the appropriate assessment stage to avoid or reduce the effects of a plan on the European site(s). Before a plan may be given effect, the plan-making authority as competent authority must ascertain that it would not adversely affect the integrity of the European site(s).

2.7 A neighbourhood plan cannot proceed to referendum or come into legal force without meeting a set of basic conditions as set out in paragraph 8 of Schedule 4B of the Town and Country Planning Act 1990⁵. One of these basic conditions is that the neighbourhood plan must be compatible with EU

⁴ [People over Wind Ruling 2018](#)

⁵ [Schedule 4B of the Town and Country Planning Act 1990](#)

obligations including the needs to demonstrate that it is not likely to have a significant effect on a European site.

3. Screening Methodology

- 3.1 There is no statutory method for undertaking a Habitats Regulation Assessment (HRA); however, the method used must be appropriate to its purpose under the Habitats Directive and Regulations.
- 3.2 Stage 1 of the HRA (i.e. the screening assessment) considers whether the plan is likely to result in a significant environmental effect on a European site. The following steps were undertaken during the screening stage:
 1. Determining whether the plan/ project is directly connected with or necessary to the management of European sites;
 2. Identifying the European sites that should be considered within the HRA;
 3. Gathering information in relation to the European Sites including:
 - Characteristics of European Sites;
 - Qualifying interests;
 - Conservation objectives;
 - Current site condition;
 - Threats to qualifying interests; and
 - Identification of relevant site management statements/plans
 4. Identification of all plans or projects that could, in combination, have the potential to result in a significant adverse effect on a Natura 2000 site;
 5. Screening the plan for likely significant effects, alone and in combination with other plans and projects;
 6. Rescreening of the Plan where changes to the Plan are made.
- 3.3 The purpose of screening/stage 1 is to assess whether further steps in the HRA process are required. This involves:
 - Identifying and eliminating the elements of the plan which will have no effect on a European site;
 - Identifying elements of the plan which would not be likely to have a significant effect on a European site, either alone or in combination with other plans and projects;
 - Identifying the elements of the plan where it cannot be ruled out to not result in a likely significant effect, either alone or in combination with other plans or projects; and
 - Assessing the significance of any effects on the European site.

4. Is the Neighbourhood Plan connected with or necessary to the management of a European site for nature conservation?

4.1 The Wadhurst NDP is not directly connected with or necessary to the management of a European site / Ramsar Site. As a consequence, the Plan is therefore subject to a HRA as required by the Habitats Regulations.

5. Identifying the European sites that should be considered within the HRA

5.1 The screening exercise identifies the following European sites for consideration in the HRA:

- Ashdown Forest Special Area of Conservation (SAC);
- Ashdown Forest Special Protection Area (SPA);
- Pevensey Levels SAC and Ramsar site;
- Lewes Downs SAC;
- Castle Hill SAC;
- Hastings Cliffs SAC;
- Dungeness, Romney Marsh and Rye Bay SPA and Ramsar site;
- Dungeness SAC.

6. Information gathered in relation to European sites / Pathways of Impact

6.1 Appendix 2 provides a summary of the information conserved as part of the screening process.

7. Identification of all plans or projects that could, in combination, have the potential to result in a significant adverse effect on European protected sites;

7.1 Plans with potential to create in combination effects include existing/emerging development plan documents in Wealden District and other neighbouring authority areas. This includes other existing and emerging neighbourhood plans. Windfall sites could also have an influence.

7.2 Appendix 3 provide a summary of the relevant plans and the elements of those plans that could cause harm to protected European Sites.

7.3 The policies within the Wadhurst NDP only guide the type and form of development taking place. It does not allocate land for a specific purpose and it does not propose location or scale of development.

8. Scope of the Screening Assessment

8.1 The HRA screening exercise undertook an exercise to identify European / international sites using an initial 20km radius around Wadhurst Parish with

the aim of screening the plan to identify whether it could result in a likely significant effect.

8.2 All sites located further than 20km from Wadhurst Parish were not considered further taking into account impact pathways and distance being beyond 20km. The European sites located beyond 20km and therefore screened out of the assessment included the following.

- Lewes Downs SAC;
- Castle Hill SAC;
- Hastings Cliffs SAC;
- Dungeness, Romney Marsh and Rye Bay SPA and Ramsar site;
- Dungeness SAC

8.3 The following sites are located within 20km of the neighbourhood area but were screened out of the assessment on the basis that the Wadhurst Neighbourhood Plan would not result in a likely significant effect on these sites.

- Ashdown Forest SPA;
- Pevensey Levels SAC / Ramsar site.

8.4 Further detail is provided at Appendix 4 as to why these European protected sites were excluded from further assessment at this stage.

8.5 The remaining site and therefore the focus of this screening assessment is Ashdown Forest SAC.

9. Air pollution at Ashdown Forest SAC

9.1 Air quality monitoring has taken place across Ashdown Forest SAC since 2014 and has identified that ambient concentrations measured at Ashdown Forest SAC for both Nitrogen Oxides (NO_x) and Ammonia (NH₃) are currently exceeding the critical level at monitor locations close to the road on the A22, A26 and A275, which traverse across Ashdown Forest SAC.

9.2 In addition, dispersion modelling across Ashdown Forest SAC has identified that currently, areas of the SAC are exceeding their critical levels for NO_x, NH₃ and nitrogen deposition.

9.3 The qualifying features underpinning the Ashdown Forest SAC designation are the presence of European dry heath, North Atlantic wet heath and great crested newts. The conservation objectives for the SAC can be summarised as ensuring the favourable conservation status of its qualifying features by, amongst other things, maintaining or restoring qualifying habitats.

9.4 Natural England's supplementary advice on conserving and restoring the SAC, linked to the PPG, explains that the heathland habitat of the Ashdown

Forest is sensitive to changes in air quality. Exceedance of 'critical values' for air pollutants may modify its chemical substrate, accelerating or damaging plant growth, altering its vegetation structure and composition and causing the loss of typical heathland species. Accordingly, development could result in an impact pathway to the SAC if it contributes to an exceedance in critical values.

- 9.5 The heathland habitat in the Ashdown Forest SAC is vulnerable to atmospheric pollution from several sources including vehicle emissions from motor vehicles. There is a potential impact pathway from increased traffic flows associated with new development on the roads which go through, or run adjacent to, the SAC. Many of the characteristic plants, mosses and lichens of heathland habitats are adapted to nutrient poor conditions and extra input of nitrogen can disadvantage these characteristic species in favour of others with a greater tolerance of higher nitrogen levels
- 9.6 The Council had proposed a new Local Plan to 2028 which sought to deliver 14,228 homes and 22,500 square metres of business floor space (the draft Submission Local Plan was subsequently withdrawn⁶). Considering the effects of that quantum of growth, Natural England was satisfied that this amount of growth would not adversely affect the integrity of Ashdown Forest Special Area of Conservation (SAC) from air quality impacts. This advice regarding air quality is that this conclusion can be reached without mitigation measures being needed under the specific requirements of the Habitats Regulations. The advice is based on the evidence provided, their expert knowledge of the particular characteristics, interest features and management of the designated sites in question and professional judgement.
- 9.7 Natural England has also advised that where an existing national, regional or local initiative can be relied upon to lead to the reduction in background levels of pollution at a site, the competent authority should assess the implications of a plan or project against an improving background trend. Air quality monitoring undertaken by the Council indicates improvements in vehicle technology will come forward and this is a further consideration in assessing the effects on site integrity of the Ashdown Forest SAC arising from the Wadhurst NDP.

10. Screening the plan for likely significant effects, alone and in combination with other plans and projects

- 10.1 The HRA Screening assessment considers whether each of the proposed policies within the draft Wadhurst Neighbourhood Plan is likely to have a significant effect on a protected European site.

⁶ [Withdrawal of the Wealden Local Plan \(2019\)](#)

10.2 A number of circumstances where a policy would have no likely significant effect on a European site⁷ can be where a policy is:

- a) **Intended to protect the natural environment**, including biodiversity, or to conserve or enhance the natural, built or historic environment, where enhancement measures will not be likely to have any negative effect on a European site;
- b) **Which will not themselves lead to development or other change**, for example, because they relate to design or other qualitative criteria for development or other kinds of change;
- c) **Which make provision for change but which could have no conceivable effect on a European site**, because there is no link or pathway between them and the qualifying interests, or any effect would be a positive effect, or would not otherwise undermine the conservation objectives for the site;
- d) **Which make provision for change but which could have no significant effect** on a European site (but is a minor residual effect), because any potential effects would be insignificant, being so restricted or remote from the site that they would not undermine the conservation objectives for the site;
- e) **For which effects on any particular European site cannot be identified, because the policy is too general**, for example, it is not possible to identify where, when or how the policy may be implemented, or where effects may occur, or which sites, if any, may be affected.

Table 1. Screening Assessment for the Wadhurst Neighbourhood Plan (Pre-Regulation 14).

Ref	Policy	Aim	Significant Effect? (Y/N)
WAD 1	Location of Development	Policy aims to direct development to the most sustainable locations and protect the High Weald AONB. Policy also seeks to designate a number of Green Gaps in order to avoid coalescence between settlements.	N This policy does not seek to allocate development but indicates the broad location (i.e. within the development boundary, on brownfield land) where development could be acceptable. The policy does not consider scale or specific location of development. Reason E
WAD 2	Meeting Local Housing Needs	Policy seeks to ensure there is a mix of housing in the Parish that addresses local housing need.	N This policy does not allocate new housing but influences the mix of future housing only. Reason B
WAD 3	Design and Character of Development	Policy seeks to ensure that development is of high quality design, adheres to relevant design guides and reflects the local context and local distinctiveness. The policy sets design criteria.	N The policy relates to design of new development and will not by itself lead to development. Reason B
WAD 4	Sustainability and Design	Policy seeks to ensure that development	N

Ref	Policy	Aim	Significant Effect? (Y/N)
		meets the highest environmental standards in terms of its construction, materials and energy use.	The policy supports sustainable design features. Reason B
WAD 5	Conserving Heritage Assets	Policy recognises the important contribution of heritage assets to local character and distinctiveness and aims to conserve, enhance and celebrate them.	N The policy intends to conserve and enhance the parish's heritage assets. Reason A
WAD 6	Conservation Areas	Policy seeks to preserve and enhance the character of the parish's Conservation Areas and their settings.	N The policy intends to preserve and enhance the parish's Conservation Areas. Reason A
WAD 7	Safe and Sustainable Movement	Policy seeks to encourage sustainable forms of transport by supporting proposals that enable/ promote active travel.	N The policy relates to the design of new development and will not by itself lead to development or other change. Reason B
WAD 8	Mitigating Traffic Congestion	Policy seeks to ensure that development proposals fully assess both their potential direct and cumulative impact on the local road network and	N Policy seeks to shape design of development in a way that considers and addresses the direct and cumulative impact on the local

Ref	Policy	Aim	Significant Effect? (Y/N)
		actively seek ways to mitigate this.	roads and considers the impact on the safety of non-car users. Reason B
WAD 9	Car Parking Provision	Policy seeks to ensure that adequate parking is provided and supports dedicated bicycle parking facilities and electric vehicle charging points.	N The policy relates to the design of new development and will not by itself lead to development or other change. Reason B
WAD 10	Employment Retention and Local Economy Viability	Policy supports new commercial activity and the expansion of existing commercial activity within the development boundaries subject to certain criteria. It also seeks to safeguard existing businesses by only supporting change of use to an activity that does not provide employment under limited circumstances and not supporting conversion to residential at all along the High Street.	N This policy seeks to retain existing businesses and restricts change of use to limited circumstances. It does not allocate land for a specific purpose and it does not consider location or scale. Reason E
WAD 11	Supporting Sustainable Rural Tourism	Policy supports sustainable rural tourism subject to criteria.	N This policy does not allocate land for development. It provides guidance on the type and form of

Ref	Policy	Aim	Significant Effect? (Y/N)
			development but does not consider scale or location. Reason E
WAD 12	Communication Infrastructure Support	Policy supports access to modern high quality communications infrastructure and provides design criteria for apparatus.	N New communication infrastructure would not be located in any proximity to a European Site. Reason C
WAD 13	Conservation of the Natural Environment, Ecosystems and Biodiversity	Policy seeks to recognise and enhance the multiple benefits of the Parish's green and blue spaces, conserve biodiversity and deliver net biodiversity gains.	N The policy intends to protect the natural environment. Reason A
WAD 14	Bowl Water Reservoir Area and Associated Public Activities	Policy seeks to protect Bowl Water in terms of its naturalness, beauty and biodiversity but also for its recreational and leisure activities. It supports proposals within Use Classes F2 (b and c) in the Bowl Water area subject to certain criteria.	N The policy intends to protect the natural environment. It does not allocate land for a specific purpose however; it does support development of a specific use. The policy does not consider precise location, form or scale of development.

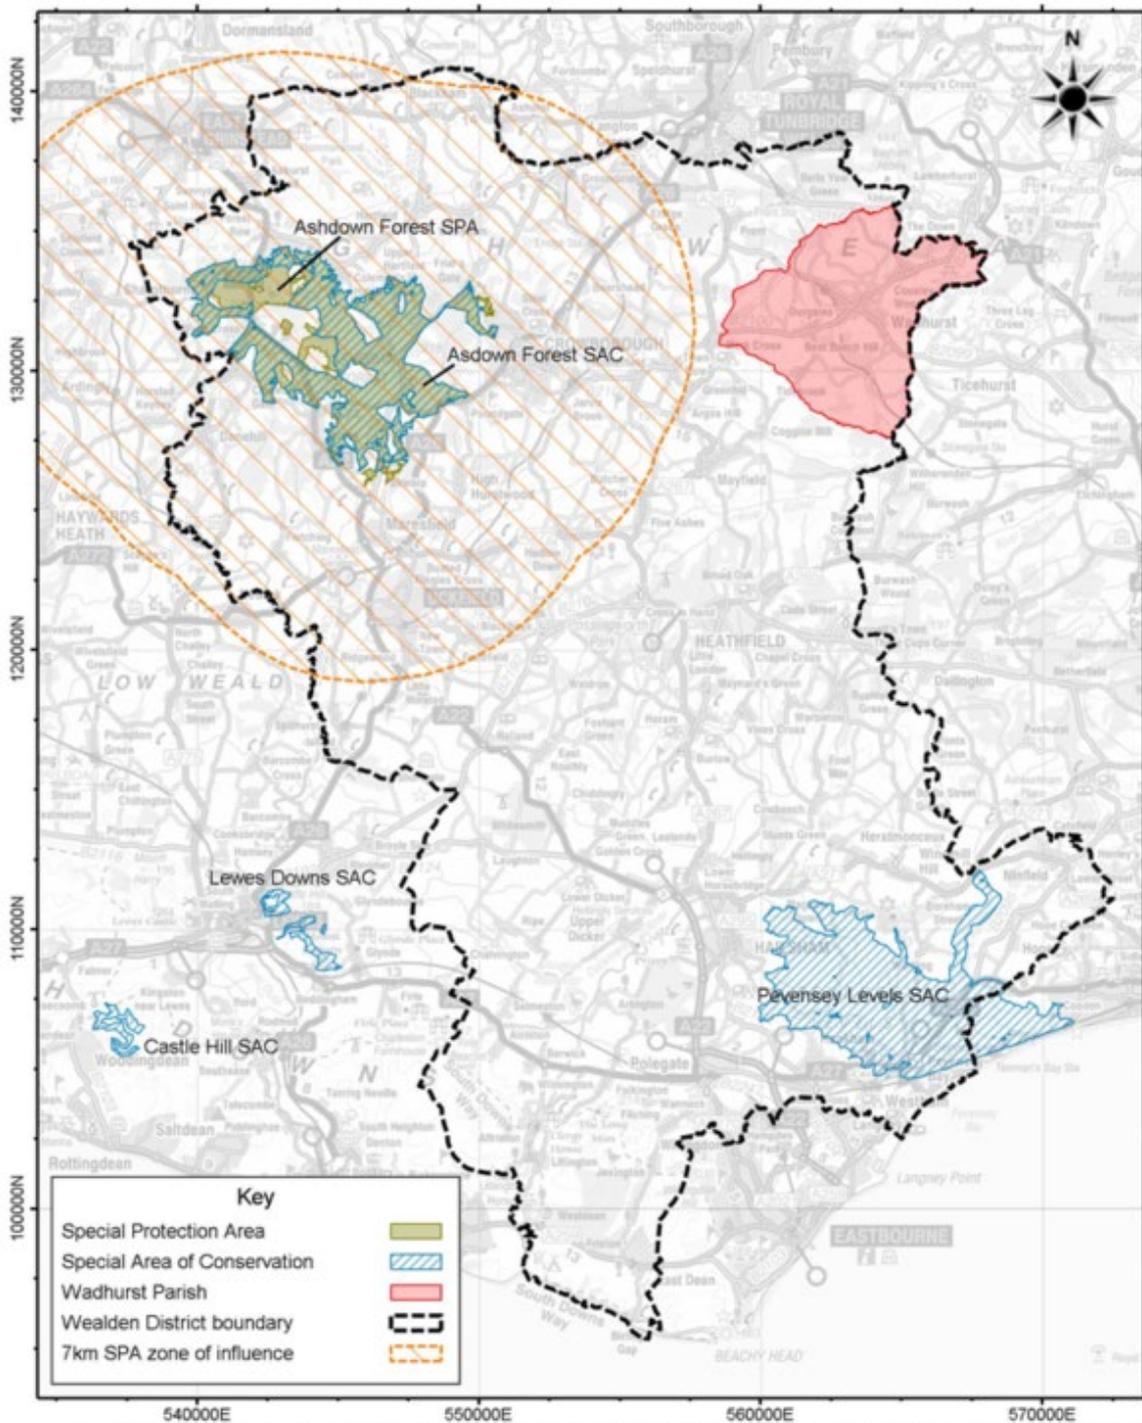

Ref	Policy	Aim	Significant Effect? (Y/N)
			Reason A and Reason E
WAD 15	Protection of Distinctive and Highly Valued Views	Policy seeks to protect highly valued views as identified in the NDP.	N The policy intends to protect the natural environment. Reason A
WAD 16	Local Green Spaces	Policy seeks to designate ten Local Green Spaces and afford them protection from development other than in very special circumstances.	N The policy intends to protect the natural environment. Reason A
WAD 17	Protection of Dark Skies	Policy seeks to reduce light pollution and protect dark skies	N The policy intends to protect the natural environment. Reason A
WAD 18	Important Community Facilities	Policy seeks to safeguard existing community facilities and support their upgrade or expansion subject to certain criteria.	N This policy does not allocate land for development. It provides guidance on the type and form of development but does not consider scale or location. Reason E

11. **Conclusion**

- 11.1 As a result of the assessment in Section 10, we can conclude that the Wadhurst Neighbourhood Plan will, in itself, not result in a 'likely significant effect' on a European site, in particular Ashdown Forest SAC, therefore an Appropriate Assessment is not required.
- 11.2 A number of the policies within the Screening Assessment seek to support development by confirming acceptability criteria for developments in the plan area. However, the policies do not in themselves allocate land for development or seek to ensure that any such development comes forward as a result of the policies, neither do they provide any information in relation to the potential location, quantum, type or scale of development. The policies instead provide a framework to guide development should it be the case that 'windfall' development comes forward. At the Neighbourhood Plan level, the policies are therefore too general to make an assessment (see table and policies in category E).
- 11.3 It is therefore appropriate to rely on the provision in the Habitat Regulations that requires a habitats regulations assessment at a later stage, which in this case would be at the planning application stage, when the exact detail of any proposed development in which to undertake an assessment will be available.
- 11.4 Based upon the conclusion above an Appropriate Assessment of the Wadhurst Neighbourhood Plan is not required. Wealden District Council consulted Natural England on this report and its conclusion. Their response states:
- “Natural England agrees with the report’s conclusions that the Wadhurst Neighbourhood Plan would not be likely to result in a significant effect on any European Site, either alone or in combination and therefore no further assessment work would be required”.*
- 11.5 Natural England’s full response is available at Appendix 5. Should significant changes be made to the Plan as it develops a new screening assessment may be required.

Site	Pevensey Levels SAC
<p>Factors that could adversely affect the site's ecological character including changes in land (including water) use and development projects</p>	<ul style="list-style-type: none"> • Introduction / invasion of non-native plant species (of particular relevance is floating pennywort); • Pollution – domestic sewage (sewage treatment works). <p><i>Anisus vorticulus</i> is a species of the upper water levels of ditches, frequently amidst botanically rich vascular plant assemblages in a mid to upper mid successional state. It favours alkaline waters although it appears tolerant of a relatively wide range of physio-chemical parameters. Appropriate ditch management is the key to the conservation of this species. Control of shade-inducing marginal vegetation is also important, as is maintaining access to the water's edge for livestock. It is also important to ensure good water quality by instigating the appropriate safeguards. This is being implemented through good environmental management, Catchment Sensitive Farming, Environmental Stewardship and Environment Agency's review of existing discharge and abstraction consents. A Water Level Management Plan, devised and managed by Environment Agency, is in place to control ditch levels. Environmental Stewardship schemes continue to encourage sensitive management, particularly of the ditches to address problems brought about by neglect.</p> <p>The main threats to the species include land drainage, inappropriate habitat management and eutrophication.</p>
<p>Key Environmental Conditions to Maintain Site Integrity</p>	<p>The Lesser whirlpool ram's-horn snail <i>Anisus vorticulus</i> is a small aquatic snail with a flattened spiral shell rarely more than 5 mm in diameter. It occurs in unpolluted, calcareous waters in marsh drains with a dense aquatic flora, and favours ditches with a diverse flora but little emergent vegetation. It often floats on the surface amongst duckweed <i>Lemna</i> spp. Ditches that are either completely cleared of vegetation or are choked with weed and silt are unsuitable. Winter flooding may be important in enabling young snails to colonise new ditches¹⁵.</p>

Site	Pevensey Levels Ramsar Site
Characteristics of European Site	<p>The site is one of the largest and least fragmented lowland wet grassland systems in southeast England, including a small area of shingle and intertidal muds and sands. The low-lying grazing meadows are intersected by a complex system of ditches which support rare and scarce aquatic plants and invertebrates (freshwater molluscs and dragonflies <i>Odonata</i> spp) as well as breeding and wintering wildfowl¹⁷.</p>
Qualifying Interests	<p><u>Ramsar Criterion 2a</u></p> <p>The site supports an outstanding assemblage of wetland plants and invertebrates including many British Red Data Book species.</p> <p><u>Ramsar Criterion 2b</u></p>

¹⁶ [Site Improvement Plan Pevensey Levels](#)

¹⁷ [Ramsar Sites Information Service](#)

Site	Pevensey Levels Ramsar Site
	The site is of special value for maintaining the genetic and ecological diversity of the region. It is probably the best site in Britain for freshwater molluscs, one of five best sites for aquatic Coleoptera and supports an outstanding assemblage of dragonflies <i>Odonata</i> spp ¹⁸ .
Ecological Features	<p>Pevensey Levels supports a range of important communities of wetland flora and fauna. Various stages of succession are present in the ditches. Floating and submerged aquatic plants such as duckweeds <i>Lemna</i> spp, pondweeds <i>Potamogeton</i> spp, or water fern <i>Azolla</i> spp. represent the pioneer stages. Larger floating or emergent plants such as frogbit <i>Hydrocharis morsusranae</i>, bur-reed <i>Sparganium erectum</i> and arrow head <i>Sagittaria sagittifolia</i> follow these. Finally, common reed <i>Phragmites australis</i> or hawthorn <i>Crataegus monogyna</i> becomes dominant. Left undredged, the ditches lose their diversity and varied structure. A rich bankside flora is also present on site. An area of shingle and intertidal muds and sands is another important component of the site. Some flora associated with the shingle is present. For example, yellow horned-poppy <i>Glaucium flavum</i> and sea campion <i>Silene uniflora</i>.</p> <p>The site supports outstanding invertebrate populations and is a top site for Mollusca and aquatic Coleoptera. Over 15 species of dragonfly (Odonata) have been recorded, including several scarce species. One of Britain's largest and rarest spiders, the fen raft spider <i>Dolomides plantarius</i> has its stronghold at Pevensey.</p> <p>The lowland wet grassland supports a variety of bird species. For example, wintering lapwing and snipe. Breeding bird species include sedge warblers, reed warblers that nest in the scrub and reeds in the ditches respectively¹⁹.</p> <p><u>Noteworthy Flora</u></p> <p>Nationally important species occurring on the site Higher plants:</p>

Site	Ashdown Forest SAC
<p>Ecological Requirements of Annex I Habitats and Annex II Species</p>	<p><u>H4010 Northern Atlantic Wet Heaths <i>Erica tetralix</i></u> – Wet heath is a community that requires acid, nutrient poor soils that are at least seasonally water logged. Wet heath often occupies areas of impeded drainage on lower valley sides and less-steeply sloping ground. Drainage is a key factor. Wet heath can occur naturally, due to abiotic factors such as soil acidity, low nutrient status and waterlogged soil conditions, which impedes succession to woodland. Wet heaths require relatively high rainfall and an even spread of rain throughout the year. Relative humidity is required to remain moderately high with winters not too cold and summers not too hot. Mild winter temperatures are important for many of the individual plant and animal species.</p> <p><u>H4030 European dry heaths</u> – European dry heaths typically occur on freely-draining, dry acidic to calcareous soils with generally low nutrient content. Nearly all dry heath is semi-natural, being derived from woodland and developed through grazing and burning. Dry heaths vary in their flora and fauna according to climate, and are also influenced by altitude, aspect, soil conditions (especially base-status and drainage), maritime influence and grazing and burning intensity.</p> <p><u>Great crested newt</u> - Great crested newts rely on waterbodies for breeding but otherwise they spend much of their lives on land. They over winter on land, normally hibernating underground and emerge soon after the first frost-free days in January or February to begin the migration to breeding ponds. Movement on land occurs almost exclusively at night and their progress is dependent on factors such as evening temperatures and rainfall, favouring wet or damp conditions with temperatures above 5 oC. Great crested newts require quite specific pond conditions for breeding. Ponds ideally need to have neutral to alkaline water (pH 6 or above) with areas of open water and well vegetated margins. Breeding ponds tend to be nutrient rich, not too shaded, free of fish with not too many waterfowl present. They require suitable refuges to use in extreme weather and during daytimes, such as large pieces of rotting deadwood, rubble piles or disused mammal burrows.</p>

Relevant Site Management Plans/ Statements	<p><u>Improvement Programme for England's Natura 2000 Sites (IPENS): Site Improvement Plan Ashdown Forest SAC²⁷</u></p> <p>The plan identifies a number of priorities, issues and actions in relation to:</p> <ul style="list-style-type: none"> • Change in land management; • Air Pollution: impact of atmospheric nitrogen deposition; • Public Access/Disturbance; and • Hydrological changes.

Site	Ashdown Forest Special Protection Area (SPA)
Characteristics of European Site	<p><u>Special Protection Area</u></p> <p>Ashdown Forest is located in the High Weald of East Sussex in south-east England, where valley mires, heath and damp woodland have developed on soils derived from Hastings Sands (Lower Cretaceous). Once a royal hunting forest, reduced grazing has resulted in the accelerated development of woodland and encroachment of bracken over former heath. Nevertheless, some fine examples of heathland habitats remain, with humid or wet heath predominating, dominated by Heather <i>Calluna vulgaris</i>, Bell Heather <i>Erica cinerea</i> and Cross-leaved Heath <i>E. tetralix</i> in the dampest conditions. Where drier heaths occur they are dominated by heather in association with Gorse <i>Ulex europaeus</i> and Dwarf Gorse <i>U. minor</i>. Stream-sides and mires add further variety, with <i>Sphagnum</i> mosses, Cottongrass <i>Eriophorum</i> sp., Bog Asphodel <i>Narthecium ossifragum</i> and Round-leaved Sundew <i>Drosera rotundifolia</i> all</p>

²⁷ [Site Improvement Plan: Ashdown Forest](#)

Site	Ashdown Forest Special Protection Area (SPA)
	<p>characteristic plants. The woodlands are also varied, with Birch <i>Betula</i> sp. typically establishing first over heath, followed by Oak <i>Quercus robur</i>, Willow <i>Salix</i> sp. and Pine <i>Pinus</i> sp. in places, eventually forming dense and shaded areas with sparse ground flora. Breeding birds of heath, scrub and woodland are associated with the varied mosaic of their respective habitats, distributed over the higher slopes and valleys of the High Weald.</p> <p>Together with the nearby Wealden Heaths SPA and Thames Basin Heath SPA, Ashdown Forest forms part of a complex of heathlands in southern England that support breeding bird populations of European importance.</p>
Qualifying Interests	<p><u>Special Protection Area</u></p> <p>Ashdown Forest qualifies under Article 4.1 of the Birds Directive by regularly supporting nationally important breeding populations of two Annex 1 species²⁸ as it is used by 1% or more of the Great Britain population of species of European importance listed in Annex I of the Directive. During the breeding season this includes:</p> <p><u>Annex I species/habitats that are a primary reason for selection of this site:</u></p> <p>During the breeding season:</p> <ul style="list-style-type: none"> • Dartford Warbler <i>Sylvia undata</i>, 20 pairs representing 2.1% of the breeding population in Great Britain (Count as at 1994). • Nightjar <i>Caprimulgus europaeus</i>, 35 pairs representing at least 1% of the breeding population in Great Britain (Two year mean, 1991 & 1992).

	<ul style="list-style-type: none"> • The structure and function of the habitats of the qualifying features • The supporting processes on which the habitats of the qualifying features rely • The population of each of the qualifying features, and, • The distribution of the qualifying features within the site.
Current Site Condition	<p>See above SSSI data in relation to SAC</p> <p><u>Dartford Warbler</u></p> <p>Current Status at Ashdown Forest SPA</p> <p>Dartford warbler numbers within Ashdown Forest declined following the particularly harsh winters of 08-09 and 09-10. However, their population in Sussex is recovering, and a survey by the Sussex Ornithological Society in 2017 found a minimum of 15 territories on Ashdown Forest</p> <p><u>Nightjar</u></p> <p>The most recent national Nightjar survey in 2004 indicated 82 churring males were present within the SPA. A survey of selected SSSIs in 2010 found 83 churring males³¹</p>
Threats to Qualifying Interests	<p><u>Main threats to Dartford Warbler:</u></p> <ul style="list-style-type: none"> • Climatic factors • Habitat fragmentation • Lack of or inadequate habitat management • Development pressures

³¹ [Ashdown Forest SPA Conservation Objectives Supplementary Advice](#)

Site	Ashdown Forest Special Protection Area (SPA)
	<ul style="list-style-type: none"> • Increased levels of disturbance and recreational use affecting breeding productivity • Urbanisation effects such as fly tipping, increased fires, dirt track biking, cat predation. <p><u>Main threats to Nightjar</u></p> <ul style="list-style-type: none"> • Disturbance by humans and recreational activities – Nightjars are ground nesting birds and can be disturbed by humans and dogs that may range into heather dominated areas and may flush birds from their nest. • Loss of nesting habitat – The area of heathland in the UK has undergone a dramatic reduction during the course of this century due to agricultural land claim, afforestation and built development. For example, it is estimated that 40% of England’s lowland heathland has been lost since the 1950s. Threats continue from housing and infrastructure developments and where heathland lacks appropriate management, it will become unsuitable as nesting habitat due to invasion by bushes and trees. • Loss of feeding habitat – Nightjars require extensive areas of suitable feeding habitat, especially uncultivated land, therefore the loss of such habitats within a few kilometres of the nesting area may result in the decline in the number of birds. • Decline in food availability – It is possible that a decline in the availability of large insects caused by changes in agriculture (such as the indirect effects of pesticides) and/or climate change, may have affected nightjar populations.
Key Environmental Conditions to Maintain Site Integrity	<ul style="list-style-type: none"> • Low levels of disturbance • Maintain the extent, distribution and availability of suitable breeding habitat • Low levels of air pollution

Site	Ashdown Forest Special Protection Area (SPA)
	<ul style="list-style-type: none"> • Connectivity between different habitats • Habitat management should retain the open, mosaic structure of lowland wet and dry heath, ensuring all life cycles of heather are present. • Maintain water quality and quantity • Maintain mix of vegetation³²
Ecological Requirements of SPA Bird Species	<p>The Dartford warbler requires an adequate provision of suitable habitat in relation to extent and distribution. Habitat should include the provision of gorse at a various age and structure amongst a mainly heathland habitat. Invasive scrub and bracken need to be controlled. Scattered European and/or Western gorse (<i>Ulex europaeus</i> and <i>Ulex gallii</i>) cover of 5% is optimal, and should be of a range of ages to provide a continuum of suitable bushes, i.e. dense (6-12 years old) and up to 1.5 m high. Larger blocks of dense gorse have been shown to be especially important during periods of snow, when the birds retreat to them. It also requires an abundance of shrub layer insects.</p> <p>Nightjars feed on seasonally available suitable prey consisting of flying insects (such as moths, beetles and flies), being most active at dusk and dawn and in some circumstances well into the night. The nightjar will travel from nest sites to feed on a range of habitats such as heathland, deciduous or mixed woodland, orchards, diverse plantations, riparian habitats, freshwater wetlands and gardens. The birds will travel an average 3km from the nest site to locate suitable feeding areas, although they can range further.</p> <p>To achieve favourable conservation condition the nightjar requires:</p> <ul style="list-style-type: none"> • an abundance of night flying insects; • open ground with predominantly low vegetation;

	development plan documents are based.	within the built-up area boundary of Eastbourne.
Eastbourne Town Centre Local Plan ⁴⁴ (adopted November 2013)	The Eastbourne Town Centre Local Plan seeks to set out a strategy and proposals for the regeneration of the Town Centre and seeks to shape development within the town centre to 2027. The document was prepared in accordance with the Eastbourne Core Strategy Local Plan, which sets out the overarching policy direction for Eastbourne.	The Eastbourne Town Centre Local Plan confirms that the five Development Opportunity Sites will deliver a minimum of 450 net residential units and new Use Class B1(a) office space, the quantum of which will be confirmed in the Employment Land Local Plan (as confirmed below, this was 3,750 sqm).
Eastbourne Employment Land Local Plan ⁴⁵ (adopted November 2016)	The Eastbourne Employment Land Local Plan is a document that seeks to guide job growth and economic development in Eastbourne up to 2027 as well as identifying an appropriate supply of land for future employment development. This Plan specifically relates to land and buildings within Use Class B1, B2 and B8.	The Eastbourne Employment Land Local Plan has a new requirement for employment floorspace of 48,750 sqm to be delivered by 2027. The employment floorspace was to be distributed through the intensification of existing industrial estates (21,875 sqm), the town centre (3,750 sqm) and Sovereign Harbour (23,125 sqm).
Lewes District Local Plan Part 1 ⁴⁶	The Lewes District Local Plan Part 1 is the main strategic planning document for the	The Lewes District Local Plan (Part 1) states that a minimum of 6,900 net

Sevenoaks Core Strategy ⁵⁴ (adopted February 2011)	The Sevenoaks Core Strategy sets out the vision and policies for the future development in the District over the period to 2026 as well as providing the policy context for other Development Plan Documents.	The Sevenoaks Core Strategy plans to provide 3,300 additional dwellings over the Plan period from 2006 to 2026.
Sevenoaks Allocations and Development Management Plan ⁵⁵ (adopted February 2015)	The Sevenoaks Allocations and Development Management Plan supports the adopted Core Strategy and contains a set of detailed planning policies to be applied locally in the assessment and determination of planning applications over the plan period (2006 -2026). The document also includes allocations for housing, mixed-use development and employment development.	The Sevenoaks Allocations and Development Management Plan supports the Core Strategy and states that the Council can demonstrate a housing land supply of 4,282 dwellings for the plan period of 2006-2026 (this is higher than the Core Strategy). The Plan also seeks to allocate a grand total of 75.5 hectares of employment development largely within Sevenoaks, Swanley and Edenbridge.
Crawley Borough Local Plan 2015 – 2030 ⁵⁶ (adopted December 2015)	The Crawley Borough Local Plan sets out the vision and policies for the future development in the Borough over the Plan period from 2015 to 2030 as well as providing a	The Crawley Borough Local Plan states that a minimum of 5,100 net dwellings will be built within the borough in the period 2015 to 2030. East Sussex, South Downs and Brighton and Hove Waste and Minerals Plan ⁵⁷ (adopted February 2013)	The East Sussex, South Downs and Brighton and Hove Waste and Minerals Local Plan (2013) sets out the vision and strategic policy decisions for specific sites to cater for unmet waste needs within the County and the safeguarding of mineral resources up to 2030.	This Plan identifies a series of waste and mineral sites across East Sussex and Brighton and Hove, which are to be safeguarded, as well as allocations for new opportunities and expansion of existing sites. A number of sites are located within Wealden District.
East Sussex, South Downs and Brighton and Hove Waste and Minerals Sites Plan ⁵⁸ (adopted February 2017)	The East Sussex, South Downs and Brighton and Hove Waste and Minerals Sites Plan (2017) provides the spatial details for the requirements contained within the Waste and Minerals Plan that was adopted in 2013. The Sites Plan identifies potential locations for the future waste facilities and safeguards existing waste and minerals resource.	The Plan identifies a series of waste and minerals sites across East Sussex and Brighton and Hove, which are to be allocated for waste management development that includes the land at Lower Dicker and Hailsham or safeguarded for mineral extraction, which includes land at Horam (Horam

Local Plan and Stage in Process	Aim of the Document	Elements of the Plan that could cause 'in-combination' effects
Development Plans (NDPs)	policies for designated Neighbourhood Development Plan areas (usually Parishes) and should support the respective Local Plans of the districts and boroughs they are located in.	'made' should, comply with the respective Local Plans of the districts and boroughs mentioned above and therefore these documents should not cause 'in combination' effects over and above the district level plans.

APPENDIX 4 Sites excluded from the assessment and justification

Site	Impact Pathway	Assessment
Ashdown Forest SPA	Disturbance Urbanisation	Wadhurst Neighbourhood Area falls outside of the 7km zone within which it has been identified that residential development is likely to result in adverse impacts on the SPA from increases in visitor numbers and effects of urbanisation such as cat predation. (see map at Appendix 1)
Pevensy Levels SAC and Ramsar Site	Water Quality Hydrology	The Wadhurst Neighbourhood Area is situated outside of the Cuckmere and Pevensy Levels Catchment Area and there would be no potential pathways in terms of surface runoff or wastewater to impact on water quality or hydrology of the SAC.
Lewes Downs SAC	Air Pollution Disturbance	Wadhurst Neighbourhood Area is located over 25km from the Lewes Downs SAC at its closest point. The SAC therefore falls outside of the area where it is considered that an increase in traffic (resulting from new development) could result in likely significant effects.
Castle Hill SAC	Air pollution	Castle Hill SAC is located over 30km from the Wadhurst Neighbourhood Area. The nearest main road is the Falmer Road, which is

Site	Impact Pathway	Assessment
		located approximately 400m west of the SAC. The SAC therefore falls outside of the area where it is considered that an increase in traffic (derived from new development) could result in likely significant effect.
Hastings Cliffs SAC	Air Pollution Disturbance Hydrology	The Hasting Cliffs SAC is located over 25km from the Wadhurst Neighbourhood Area. The SAC therefore falls outside of the area where it is considered that an increase in traffic (derived from any new development) could result in a likely significant effect. Additionally, it is unlikely that development arising from the Wadhurst NDP, or within Wealden District overall, would have an effect on the water quality or hydrology of the SAC
Dungeness, Romney Marsh and Rye Bay SPA and Ramsar site.	Disturbance Air pollution	Dungeness, Romney Marsh and Rye Bay SPA and Ramsar site are located approximately 28 km from the Wadhurst Neighbourhood Area. Given the distance, development within the Wadhurst Area will not result in adverse air pollution, water quality or hydrological impacts.
Dungeness SAC	Disturbance Air pollution	Dungeness SAC is located over 35 km from the Wadhurst Neighbourhood

Site	Impact Pathway	Assessment
	Hydrology	Area. Given the distance, development within the Wadhurst Area will not result in adverse air pollution, water quality or hydrological impacts.

Dear ██████████

Wadhurst Neighbourhood Plan – Review SEA & HRA Screening

Thank you for your consultation on the above dated and received by Natural England on 09 September 2022.

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

Screening Request: Strategic Environmental Assessment

It is our advice, on the basis of the material supplied with the consultation, that, in so far as our strategic environmental interests (including but not limited to statutory designated sites, landscapes and protected species, geology and soils) are concerned, that there are unlikely to be significant environmental effects from the proposed plan.

Neighbourhood Plan

Guidance on the assessment of Neighbourhood Plans, in light of the Environmental Assessment of Plans and Programmes Regulations 2004 (as amended), is contained within the [National Planning Practice Guidance](#). The guidance highlights three triggers that may require the production of an SEA, for instance where:

- a neighbourhood plan allocates sites for development
- the neighbourhood area contains sensitive natural or heritage assets that may be affected by the proposals in the plan
- the neighbourhood plan may have significant environmental effects that have not already been considered and dealt with through a sustainability appraisal of the Local Plan.

We have checked our records and based on the information provided, we can confirm that in our view the proposals contained within the plan will not have significant effects on sensitive sites that Natural England has a statutory duty to protect.

We are not aware of significant populations of protected species which are likely to be affected by the policies / proposals within the plan. It remains the case, however, that the responsible authority should provide information supporting this screening decision, sufficient to assess whether protected species are likely to be affected.

Notwithstanding this advice, Natural England does not routinely maintain locally specific data on all potential environmental assets. As a result the responsible authority should raise environmental issues that we have not identified on local or national biodiversity action plan species and/or habitats, local wildlife sites or local landscape character, with its own ecological and/or landscape advisers, local record centre, recording society or wildlife body on the local landscape and biodiversity receptors that may be affected by this plan, before determining whether an SA/SEA is necessary.

Please note that Natural England reserves the right to provide further comments on the environmental assessment of the plan beyond this SEA/SA screening stage, should the responsible authority seek our views on the scoping or environmental report stages. This includes any third party appeal against any screening decision you may make.

Habitats Regulations Assessment (HRA) Screening

Natural England agrees with the report's conclusions that the Wadhurst Neighbourhood Plan would not be likely to result in a significant effect on any European Site, either alone or in combination and therefore no further assessment work would be required.

For any new consultations, or to provide further information on this consultation please send your correspondences to consultations@naturalengland.org.uk.

Yours sincerely

Consultations Team
